To whomever it may concern,

My name is Hong Zhou. I teach Computer Science courses at Northside Independent School District. I am delighted to recommend Nicholas Galus for participation in your internship program. Nicholas was in my Computer Science II Honors class (equivalent to AP Computer Science A) and our school University Interscholastic League (UIL) team for Computer Science. Although I have only worked with him since August 2022, I have witnessed enough to know that he is the best student a teacher can hope to have.

Nicholas Galus is a committed problem-solver, an enthusiastic learner, a considerate team member, and a leader by example. Nicholas demonstrated his exceptional intellectual curiosity in our computer science class. The Computer Science II course was intensive for most students; however, Nicholas came to the class with some programming experience and met the challenge gracefully. His attention to detail and ability to focus is at the top of his class. He approaches problems with determination and open mind, and is highly resourceful in searching for additional useful information beyond what has been presented to the class.

While working hard, Nicholas also works smart. He manages his time very well succeeding in high level courses and varsity sports teams. Nicholas does not hesitate to ask for help when he needs it, and he never needs help twice on similar topics. Watching him work is like watching a well-oiled machine producing high quality products. In addition to staying ahead of the course pace and assignments, Nicholas regularly offers to help his classmates, especially in debugging.

Our school is a magnet program housed in a title I campus. 2022 was the first time we had a team for UIL Computer Science. Nicholas is our core member. During UIL practice I observed him working with like-minded peers, and continue to be amazed on how much more productive and creative they can be when they feed off each other's talent and skill.

Overall Nicholas Galus has earned my highest recommendation to any program he desires. I trust that he has done his research to look for the right fit for him, and I believe that he will thrive in wherever he puts his mind to. If your program seeks to recruit intellectual young minds who are also responsible, dedicated, kind, and with strong perseverance, Nicholas Galus is the right candidate.

Sincerely,

Hong Zhou, Ph.D.
